Price 25 cents

STUDENTS' COST OF A YEAR AT CANADIAN UNIVERSITIES

1949

1.

The tables on the following pages are based on a survey made by a committee of the National Federation of Canadian University Students assisted by the Education Division of the Dominion Bureau of Statistics.

A questionnaire was sent out in sufficient quantity to have given a 10 p.c. sample of the students in several faculties of ten of the larger universities. While the response fell short of 10 p.c., the tables represent the experience of 1,291 single students during the academic year 1947-48. Of these 213 were women in Arts and Science.

In order to extend the information to include at least one representative institution in each province, estimates based on the results of the survey were made for five additional centres.

2.

The expenses are classified under nine headings: (1) "Tuition and other fees" is intended to include all the extra fees varying with the course such as caution fees, athletic fees, laboratory fees, health insurance, student federation, etc.; (2) "Textbooks and equipment" covers the cost of all equipment, as well as textbooks, which the individual student is required to purchase; (3) "Living expense" is the cost of food and lodging, which may be combined for those living in a university residence or fraternity and those boarding in private homes, or may be separate items for those rooming and buying their meals out; (4) "Clothing"; (5) "Laundry"; (6) "Transportation" is limited to the amount spent on transportation to and from the university within the local centre. Transportation from the student's home, when he is living away from home, is not included; (7) "Health" includes all medical and dental expenses; (8) Sports, shows, dances, candy, cigarettes are all combined under "Recreation"; (9) "Other expenses" comprise club fees; church and charitable contributions; books, magazines, papers for general reading; and other items such as toilet articles, haircuts, etc., which cannot be classified elsewhere.

Tables 1 to 6 show the average total cost by faculties, with separate tables for men and women in Arts and Science. The results show that, in general, a year at university is more costly for men than women. This is particularly true of living expenses, laundry and recreation. Women spend more on health services than men.

There is a noticeable variation in cost between centres. The average of total expenses for men in Arts and Science varies from \$892 to \$1,247, and for women from \$816 to \$1,103.

Usually Arts and Science courses involve the least expense. Engineering may cost up to \$165 more. Fees are \$5 to \$117 higher with two out of eight centres charging around \$100 more than for Arts courses. Usually a little more is spent on textbooks and equipment.

A year in Forestry, given at three universities, costs \$67 to \$211 more than a year in Arts. Fees are higher, as well as expenditure on clothing and laundry.

Fees for dentistry are \$10 to \$180 above those for Arts. While the expenditure on textbooks alone varies little from that in an Arts course, the cost of equipment raises the expense for textbooks and equipment for the four years of the course to a total of \$600 to \$1,000 depending on the institution. In most cases the greater proportion is spent in the first two years and in all cases this expense is much lower in the fourth year.

Medicine appears to be the most expensive course. Fees vary with institutions from \$252 to \$450. While the amount required for textbooks and equipment is less than that required for dentistry in the same institution, it is anywhere from \$25 to \$117 more than that required for Arts. In six of the universities the cost of clothing was greater, and laundry in all cases.

Table 7 omits tuition and other fees which vary with the course, and shows the minimum required to meet all other expenses, together with the amount most frequently reported which presumably is the cost to the student in normal circumstances. The highest reported cost is also shown. Figures are given for single men under the three possible conditions for students not living at home.

Table 8 analyzes the largest single controllable item, living expenses, to show the least amount required, the most common cost, and the highest, separately for those living in university residence and those boarding and rooming.

Fees for residence fluctuate less than the cost of living outside so that in a period of high prices it is cheaper on the average to live in a residence, while in a period of low prices it may be more expensive.

LIST OF TABLES

All Tables are for the Academic Year 1947-48

- Table 1. - Average Total Cost of a Year at University in Arts and Science, Men

fraternity is \$200 more than that for all students and the minimum is \$500 in each

APPENDIX

Earnings of Students

This appendix has been added to show what proportion of university students earn something towards meeting their expenses and to give some idea of how much they earn. The data are for ten university centres and are based on the same returns as used for the tables on costs.

Earnings for part-time employment as well as from summer vacation work are shown separately for men and for women. No attempt has been made to show a breakdown by faculties because of the smallness of some of the samples. For the same reason returns from the women students at the Maritime universities are treated as a unit as are those from the Ontario universities other than the University of Toronto. However, the available evidence shows little if any variation in the earnings of women students at the centres so combined.

The median, that is the amount earned by the middle student in the range, is used to show average earnings. The distributions are such that in most cases it fairly indicates the most frequent earnings.

Summer Savings

Summer savings are the amounts students were able to save from their earnings during the previous summer vacation, and apply to the expenses of the university session. It has not been possible to distinguish between those who had living expenses to deduct and those whose earnings were almost all saved.

The summer savings of a second year student were earned during the vacation following the first year of attendance. The summer savings of first year students are essentially the earnings of high school graduates.

Men reported available summer savings all the way from \$20 to \$900. The medians for the ten centres varies almost \$100, from \$268 to \$360. Students of the University of British Columbia reported the highest range of earnings, and this holds true for individual faculties. Earnings above the average are also reported from the University of New Brunswick and the University of Western Ontario. In the former centre this is due to higher earnings of Engineering and Forestry students.

The average student in Engineering returns from summer employment with more in pocket than those in Arts, Medicine or Dentistry, and Forestry students are still better off. A fair picture of the relative differences is shown by returns from the students at the University of Toronto.

<u>FACULTY</u>	<u>LOW</u>	<u>MEDIAN</u>	<u>HIGH</u>
Arts (men only)	20	250	900
Engineering	50	285	800
Forestry	250	480	750
Medicine	60	262	500
Dentistry	4	275	580

The scale of savings of women is lower than that of men. While the lowest reported was \$40, the highest was only \$800. Medians vary from \$150 to \$254, and again the highest is for the University of British Columbia.

Combining the figures for men and women for all ten centres, and classifying them on the basis of year in course, results in a median of \$252 for savings available to the first year student and an average annual increase of about \$20 per year to a median of \$334 for fourth year students. The same combination shows that, of those reporting, 73 p.c. of the first year students had available savings from summer work, 84 p.c. of the second year, 81 p.c. of the third year and 77 p.c. of the fourth year students.

Part-Time Employment

The amounts reported under this heading are actual earnings without any of the deductions for living expenses applicable to some of the summer earnings. For this reason the higher maximums are possible though most of the earnings are low.

The earnings reported by men vary from \$5 to \$1500 but only 8 men out of 310 reported earnings of \$500 or over. Ninety-three percent reported less than \$300. The medians vary from \$50 to \$132 and show earnings in Quebec and two of the Ontario centres higher than in the other six centres.

On the average, women earn three-quarters as much as men and the maximum reported was only \$515. Eighty-nine percent of the women reported earnings under \$200.

When the data are classified on the basis of year in course regardless of sex the medians for the first three years are \$82, \$81, and \$87, respectively. The median for the fourth year is much higher (\$133) due, in part, to the employment of fourth year students as instructors, student assistants and demonstrators in the universities. However, only 15 p.c. of the fourth year students reporting earned \$300 or more.

TABLE 9 - EARNINGS OF MEN STUDENTS AT TEN UNIVERSITIES
